

DO YOUR SUMS

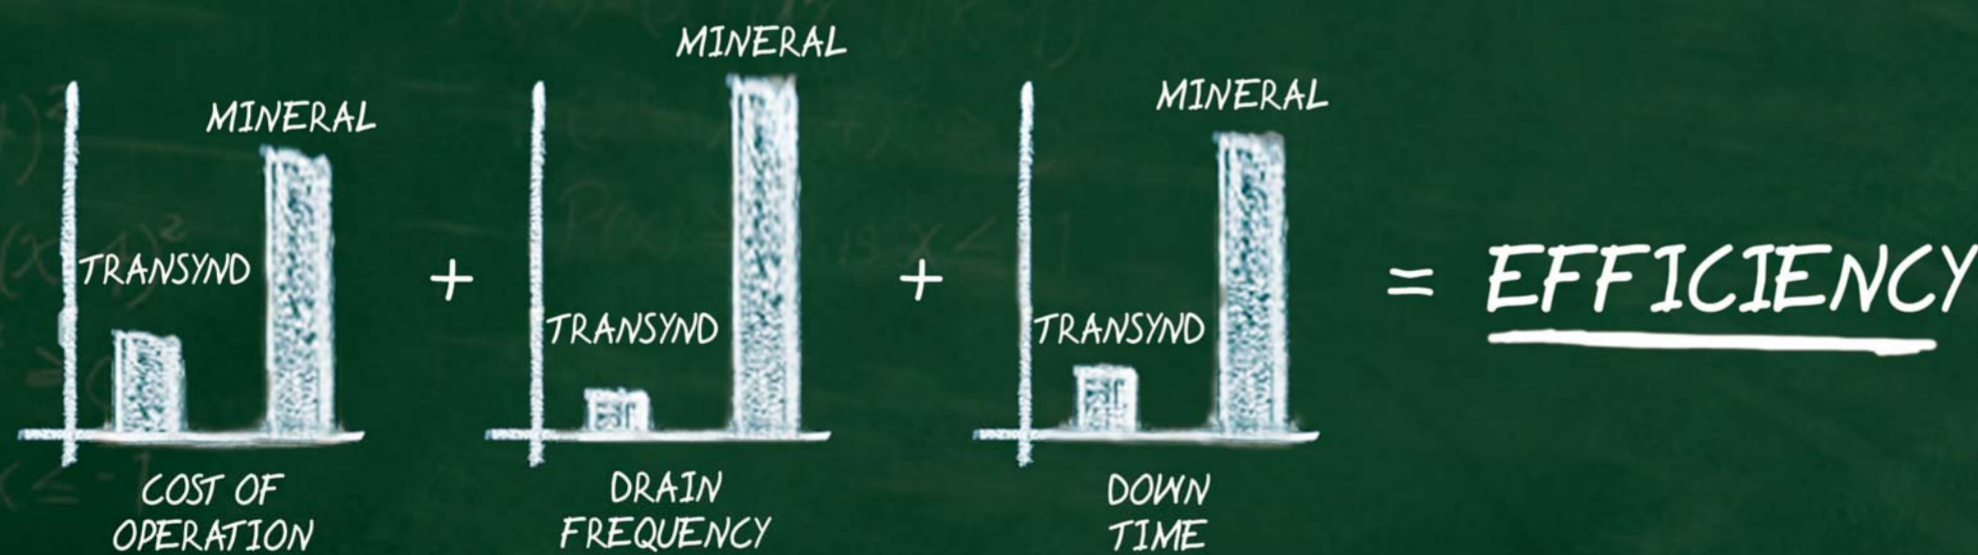

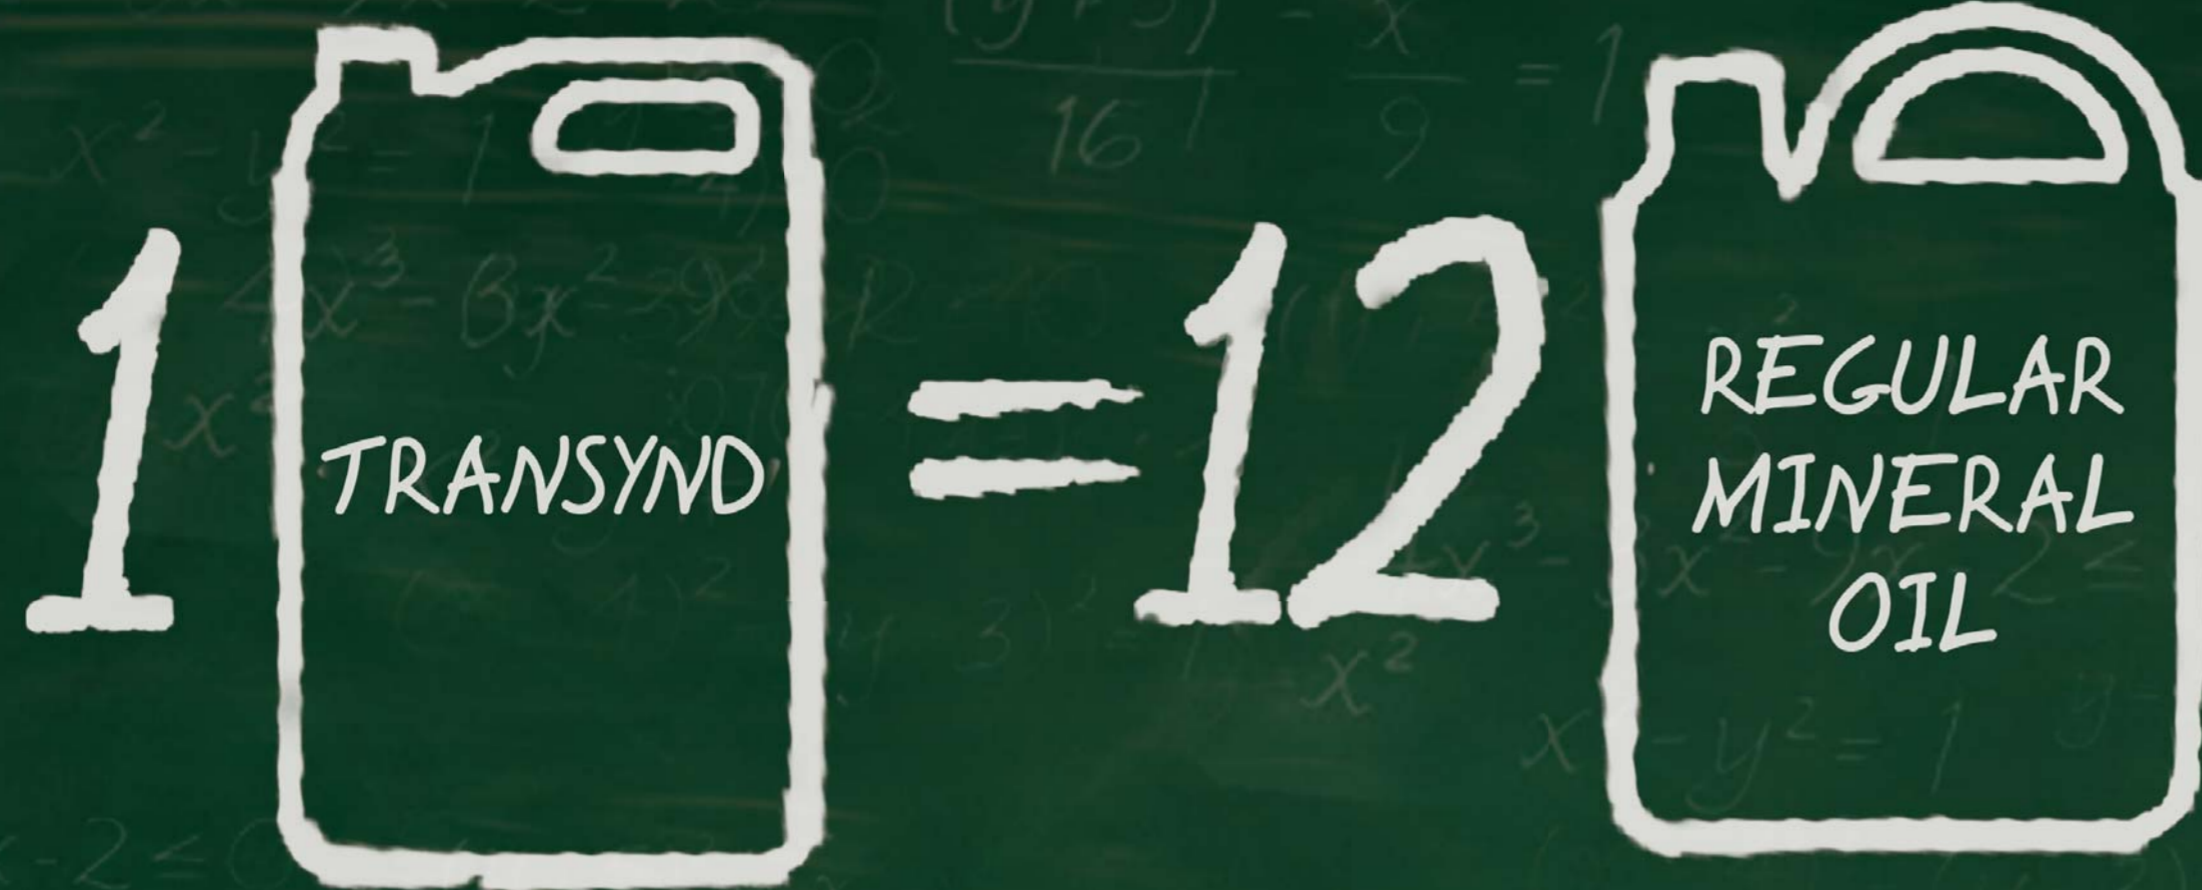

Your truck left the factory filled with Castrol **TranSynd** – a synthetic automatic transmission fluid co-engineered by Castrol and Allison.

Approved for use under the Allison TES 295 specification, Castrol **TranSynd** is specifically designed to extend your drain interval up to 12 times* longer than with regular mineral oil that meets Allison TES 389. This means a lot less downtime and a significantly lower cost of operation – all leading to more dollars hitting your bottom line.

If you're no longer using Castrol **TranSynd**, change back today. **Do your Sums – It just makes more sense.**

IT'S MORE THAN JUST OIL.
IT'S LIQUID ENGINEERING.

Castrol TranSynd co-engineered with Allison Transmission.

*Using Genuine Allison filters and as per Series 4000 and 3000 recommended General and Severe drain intervals with TranSynd.
